Profile

I am a creative and adaptive fullstack developer from Aalto University with a passion for entrepreneurship, problem solving, mathematics and design.

My principle is to create solutions which optimize the requirements and constraints without sacrificing quality.

Experience

Kandidaattikustannus Oy

1/2019 - Present

I work as an IT specialist developing and upkeeping the company websites, creating graphical designs, managing a junior developer, being consulted in business decisions regarding IT and communicating technical problems into layman terms for the directors and other personnel.

Most of my programming work is done with PHP, JS + jQuery and vanilla HTML / CSS and Figma for designing. I use third-party libraries for JS and CSS if appropriate.

I created a platform for our e-books to unify the user experience from separate websites and make it easier to create new features and functionality. Later I conducted user experience research with our customer base and brought the average user rating of aforementioned platform to 4.25 / 5.

I created an administrator platform to manage our advertisements and analyze the advert traffic.

Personal projects

In my personal projects I have complemented my skillset by using NodeJS and ReactJS for fullstack projects.

You can find most of my personal projects at <https://teekkari.net> or <https://github.com/teekkari>.

Education

Aalto University

Bachelor's degree (2017 -)

Major: Computer Science

Minor: Mathematics

Olarin lukio (2014 - 2017)

Matemaattis- ja luonnontiedepainotus

Matriculation Examination

Skills

- Python
- PHP
- MySQL
- JavaScript
- NodeJS
- ReactJS
- HTML5
- CSS & SASS
- Git
- Figma
- Gimp
- Linux

Interests

I am interested in mathematics, entrepreneurship, data science, mental health, music production, psychology, marketing, skate-/snowboarding and frisbeegolf.
